sophisticated analysis capabilities, the graphical user interface is intuitive and easy to learn. A machining specific preprocessor streamlines the setup of routine turning, drilling and milling simulations. For more complex processes, the standard preprocessor provides considerable flexibility in the problem setup.

metal cutting are: Abaqus, Deform and AdvantEdge (Table 1). Applications of FEM models for machining can be divided in six groups: tool edge design, tool wear, tool coating, chip flow, burr formation plus residual stress and surface integrity [7]. This paper makes an overview of possibilities when using FEM. An incremental Lagrangian
