...

Rocks are made up of minerals. Different mineral compositions make up different rocks. Minerals will change with the introduction of different climates and temperatures. Through these changes, the rock cycle develops. Igneous, Sedimentary and Metamorphic rocks interchange depending on what is happening in the environment.

Rocks and minerals 6th grade science - Home

Phosphate rock is the primary source of phosphorus for industrial applications. Phosphorus in phosphate rock most commonly occurs within apatite ($\text{Ca}_5(\text{PO}_4)_3(\text{F},\text{Cl},\text{OH})$). Apatite is found in sedimentary, igneous, and metamorphic rocks.
