Brain and Eyeball Dissection Lab Report by Gabby Warner

RED is used to catch your eye. The dissection of the sheep's brain will assume the following sequence. You'll begin with a careful examination of many of the external features of the brain. The next step of the dissection will require that you bisect the brain along the longitudinal midline to produce a mid-sagittal section. A midsagittal section allows many of the prominent features of the internal and medial face of the hemispheres to be observed.
