Basic ratios (practice) | Khan Academy

Ratio problems are word problems that use ratios to relate the different items in the question. The main things to be aware about for ratio problems are: 1. Change the quantities to the same unit if necessary. 2. Write the items in the ratio as a fraction. 3. Make sure that you have the same items in the numerator and denominator.

Ratio Word Problems (solutions, examples, videos)

Question: In a mixture of 45 litres, the ratio of sugar solution to salt solution is $1:2$. What is the amount of sugar solution to be added if the ratio has to be $2:1$? Answer: Number of litres of sugar solution in the mixture = $(1/(1+2)) * 45 = 15$ litres. So, $45-15 = 30$ litres of salt solution is present in it.

Equivalent ratios (practice) | Khan Academy

So the ratio of flour to milk is $3 : 2$. To make pancakes for a LOT of people we might need 4 times the quantity, so we multiply the numbers by 4: $3 \times 4 : 2 \times 4 = 12 : 8$. In other words, 12 cups of flour and 8 cups of milk. The ratio is still the same, so the pancakes should be just as yummy.
