The Evolution of Beauty: How Darwin's Forgotten Theory of Mate Choice Shapes the Animal World—and Us is a 2017 book by the ornithologist and evolutionary biologist Richard O. Prum about the power of aesthetic mate choice, arguing it to be an important independent agent in evolution. Prum indicates that while Charles Darwin made this argument in The Descent of Man, published in 1871, the concept was sidelined and forgotten and the notion of natural selection being the sole driver of ...

Evolution of Beauty looks at the theory of Sexual Selection from the idea proposed by Darwin to our current day synthesis of ideas. The book argues for re-elevating this mechanism to the prominence that it deserves. However, I would argue that among many who have studied evolution, it has held such a position for many years.
